#### PLANS FOR THE ELECTRIFICATION OF DOBRUDZHA

Electrification is an important target in Chervenkov's plan for the transformation of Dobrudzha. Electricity has already been supplied to the towns of Dulovo, Tervel, General Toshevo, and Silistra, and to 62 villages. During 1951, the regional water supply districts of Tervel, Silistra, Dolapnitsa, Slavia, and Bezmer were electrified. Electrical workers have successfully installed a powerful pumping station in Batova, which supplies water to the city of Tolbukhin, as well as stations in Kavarna and Vuklino. State farms in Bezhanovo and Gornyak, machine tractor stations in Senokos and Vasilevo, and the farm workers' cooperatives in Metodievo have been electrified. Homes in the villages of Bezhanovo, Preseltsi, and Zakhari Stoyanovo in General Toshevo Okoliya, and in Levchantsi and Miladinovo in Tolbukhin Okoliya are being electrified. Long-distance power-transmission lines are being erected between the cities of Stalin, Kavarna, and Balchik, and between Silistra and General Toshevo. The main long-distance power-transmission line is being erected between Stalin and Tolbukhin.

The plan for 1952 provides for the electrification of 66 new villages in Dobrudzha. For the fulfillment of these tasks, the "Oblastni Elektrifikatsionni Stroenhi" (Oblast Electrification Constructions) state industrial enterprises in the cities of Stalin and Ruse have made the necessary preparations. In accordance with the plan for electrification during the first quarter 1952, Vuklino, Gornyak, Ezerets, Metodievo, and Bezmer will be electrified. The plan provides for the electrification of 17 settlements this year in Tolbukhin Okoliya. Transformer stations have been built in the villages of Kotlentsi, Odurtsi, Voysil, Kopanets, Goshanovo, and Ovcharovo, all in Tolbukhin Okoliya.

The decree for Dobrudzha obliges the people's soviets of workers' deputies in electrified localities to build all the transformer stations in Dobrudzha with the use of volunteers and with funds provided from the budget of the Ministry of Electrification. The "Oblastni Elektrifikatsionni Stroenhi" state industrial enterprises and the local people's soviets of workers' deputies do not cooperate as well as they should. For example, the "Oblastni Elektrifikatsionni Stroenhi" state industrial enterprises in Stalin in certain instances worked independently

of the Okoliya People's Soviet of Workers' Deputies in Tolbukhin and sought help only when difficulties were encountered. In certain cases, the "Kolastni Elektrifikatsionai Stroeshi" state industrial enterprises release their own plans and fulfill them at their own discretion without the plans first having been approved by the Okoliya People's Soviet of Workers' Deputies in Tolbukhin.

The insulators, zinc-plated conductors, and other materials often do not arrive as scheduled, and this delays plan fulfillment. These faults must be rectified quickly to insure timely fulfillment of the decree for the electrification of Bohrudzha.
